MHP – A Porsche Company

Freelancing

June 2018 - Present (2 years 6 months)

Fullstack developer on a Planning Tool using Eclipse RCP, Spring Boot, OracleDB. Responsibilities were maintenance and development of the Eclipse RCP Client, migrating the old SAP based backend to a Spring Boot backend and developing the backend for a new web client. Migrate SVN to Gitlab, Jenkins to Gitlab CI/CD. Desing the new webservices according to REST best practices. Refactor business logic from fat-client to the backend. Responsible for converting User Stories to technical specifications.

Freelancing

8 years 3 months

Freelancer Software Development - business partner EBS

April 2010 - June 2018 (8 years 3 months)

Cluj-Napoca

Worked as a Full-Stack Developer on a Web Application for a Swiss Company. The application is an extendable Platform that manages documents, workflows, ETL Transformations, dashboards, reports and has also a machine learning module. Technologies used: AngularJS, Coffeescript, Java 8, Spring Boot, Jersey, PostgreSQL, JPA with Hibernate, Docker, Kubernetes. Started as a developer and later on took more responsibilities including SCRUM Master and in some instances Technical Lead. Responsible for converting User Stories to technical solutions.

Worked as a Front-End Developer on a Eclipse RCP based Planning Application using SWT and JFace for a big automotive company in Germany. My role is to develop new features based mostly on functional specs using Eclipse RCP, Java, SWT, JFace and Jasper Reports. Daily interaction with the German client (German language.) and occasional business trips in Germany. Tools used in development process: Eclipse, iReport, Ant, SVN and Jira.

Worked on an internal Windows Store & Windows Phone 8 App. I took part in developing the the server-side application and the Windows 8 and Windows Phone 8 clients using C#, WCF Data Services, Windows Store Apps API, Windows Phone 8 and MVVM Light.

Web Developer

May 2013 - February 2014 (10 months)

Developing a Taxi Management Web Application for a U.S. Client, using Ruby on Rails, WebSockets, LeafletJs, HTML/CSS, Bootstrap and javascript. Some of the features of the appciation include, ticket management, finances, statistics, driver position tracking and display using a map, chat functionalities and notifications.

My role in this project was to analyse and implement the clients functional requirements.

Centric IT
